

INCLUDED IN YOUR HEALTH PLAN

CancerCARE

Cancer Management Program

No one should have to face cancer alone. CancerCARE, operated by INTERLINK, is included in your health plan and is a comprehensive cancer management program designed for employees and covered dependents. Whether you have a history of battling cancer, or have recently been diagnosed, highly-experienced nurse advocates are here to help. The CancerCARE team members will work as your advocate to ensure you receive evidence-based care, developed nationally by leading cancer Centers of Excellence, with tested and proven results.

How to use this program:

A cancer diagnosis for you or a covered family member, that is identified by Meritain through health plan data and pre-certification information, will be referred directly to the CancerCare triage team as a new oncology case. Members should call the CancerCare triage team if they or a covered family member receives a cancer diagnoses. The triage team wants to ensure they can perform outreach to engage you or your family member, and provide help as soon as the referral form comes in.

Medical plan participants can also call to register directly into the program as soon as a cancer diagnosis is made, or if they had cancer previously. By enrolling at time of diagnosis, the CancerCARE program can make the most positive impact on outcomes and success in recovery, as there will be no missed opportunity for assistance in the early steps and planning phase of cancer treatment. When you activate the CancerCARE benefit, you are taking a pivotal step on the road to wellness.

You can easily register at the time of diagnosis by calling the triage team directly at **877-640-9610**, or by enrolling via the web at **www.cancercareprogram.com**. Note that if you register online, you should expect a phone call from an intake coordinator to get additional information.
